The features you see near LSZ59/UWBZ40 are some type of retention structures. There are no buildings in that area. It's interesting to note that the boring log shows groundwater was encountered about 10-ft higher here than in the other borings. If you look at the current Google Earth photo, there is discoloration of the ground in this location that appears to be a large liquid spill/release.

Dan

Please see Eva's comment below. PID at LSZ59/UWBZ40 is 3.7 at 10 feet and 6.3 at 15 feet. I might be more concerned by LSZ 61 /SB19 next to Army Reserve building hydrocarbon odor noted from 20-40 ft bgs, PID 305 at 35'

Carolyn –

Note the perimeter monitoring well temperature data on page 9 of this report. All of the wells showed significant increases in temperature. This is likely a sign that higher concentrations of contaminants are also headed for the perimeter wells –

Note also that boring LSZ59/UWBZ40 has PID reading starting at 10 ft bgs – is there a PID screening criteria for hydrocarbons for vapor intrusion? This boring appears to be near a building –
